

Geoscenario Work Checklist

Geoscenario Name: _____

PREPARING INFORMATION

Consider the clearest way to present your information. You may use any visuals from the FOSS resources as long as you create your own caption.

Review the following checklist. Initial each step as you complete it.

- _____ I have answered my specialist questions completely in my notebook.
- _____ I made significant contributions to our group's visual presentation.
- _____ All my writing is in my own words.
- _____ I have explained my information to my team members so they can answer questions other students may ask about my part of our geoscenario.
- _____ I understand my teammates' parts well enough to answer questions other students may ask about any part of our geoscenario.

PRESENTING INFORMATION

Each day of the presentations, half of your team will remain with your station and present the information to students while the other half of your team explores other geoscenarios. On the second day, your team will switch roles.

When you are presenting, make sure to use visuals and evidence to answer questions.

When you are exploring other geoscenarios, you must choose to answer three questions from the Presentation Questions. Support your answers with evidence presented by the other teams.
